MathFLIX CHALLENGE

Order of Operations Puzzle 2

Use 8, 4, 2, and 1 to make equations that equal 0 – 10. You must use each number only once. You may NOT change the order of the numbers, but you may use the operations (addition (+), subtraction (-), multiplication (*) and division (/)) in any order and any number of times. You may use parentheses and exponents. The first equation has been done for you.

$0 = (8 - 4 * 2) * 1$

$1 =$

$2 =$

$3 =$

$4 =$

$5 =$

$6 =$

$7 =$

$8 =$

$9 =$

$10 =$
